
High Sensitivity RF Bug Detector From <http://www.jammerbooster.com/>

MODEL:	KD-56B
SIZE:	140*70*25mm
PACKAGE:	Neutral packing

High Sensitivity RF Bug Detector

Model: KD-56B

Introductions:

KD-56B is the newest top quality Handheld RF bug detector. It can be used to detect and locate hidden transmitters (bugs) in your home, office or car, and also wireless spy cameras, cellular phones, satellite phone and other radio frequency devices.

KD-56B designed with the latest in microchip countermeasure technology, it has an operational frequency range of 50MHz to 6.0GHz.

Specially designed for easy and simple use, no need complicated installation or any professional knowledge.

Features:

Find bugs in silent place

Find signal sources of bug

Unique acoustic display

Not only a Bug Detector, can catch all kinds of wireless spy camera and detect mobile phone signals

No Interference with Radio Base Station

Battery low warning function

Technical Specifications:

Detecting range: 50MHz—6.0GHz

Dimension: 140*70*25mm

Weight: 0.2kg

Power supply: 12V DC 1A Switching power adaptor, Built-in rechargeable battery pack

Warning mode: LED indication; Beep alarm sound; Acoustic display; Vibration; Earphone silent detection

Sensitivity Tuner: can adjust detecting distance to find signal source; eliminate the environment interference

Detecting Distance:

Wireless bug: up to 20 feets (beep); up to 10 feets (acoustic)

2.4GHz Wireless camera: up to 8 feets (regular 10mW camera)

1.2GHz Wireless camera: up to 12feets (regular 10mW camera)

2G Cellular phone: up to 35 feets
